A Better Shower Experience

You want a shower that makes water feel therapeutic. One that can wash away tension, invigorate the spirit or simply provide a few moments of indulgent solitude every day.

With a range of valve options, showering devices and product innovations, Moen® helps homeowners, designers and installers create custom showers that deliver a fully personalized experience. It all starts by discovering what an ideal shower means to the people who'll use it.

Flara ExactTemp® shower and free-standing tub filler with matching bath accessories

Design Your Shower

Personalizing your shower experience starts by thinking through four primary considerations.

CONFIGURATION

Consider how many walls you'll use.

How many of the walls surrounding your shower will be glass? Want all of your controls and shower devices on the same wall? Or would you rather be surrounded with spray? Don't forget, the ceiling can serve as an extra wall for a rainshower. Will you need to include a tub spout?

Find dozens of shower configuration ideas starting on page 13.

SHOWERING DEVICES

Select water spray options.

Showerhead. Handshower. Rainshower. Body sprays. Which do you prefer? How many of each?

Explore the entire line of shower devices at moen.com.

VALVE OPTIONS

Take control.

The options can seem complicated, but it's really just a matter of how you'd like your shower to function. Do you want your shower to be a part of your smart home? Would you like to control water volume and temperature independently? Do you want to use more than one showering device at the same time?*

The overview chart on page 5 is a great place to start exploring your Moen valve options.

TRIM STYLE AND FINISH

Get the perfect look.

The handles, showerhead style and connections to your wall are called trim. Is your trim style minimalist modern? Or are you going for a more elegant, traditional look? Do you prefer mirror-like Chrome or the bold statement of Matte Black?

Browse trim collections by style category at moen.com.

Ceiling-mount Rainshower (S1003)

U by Moen™ Controller (TS3304BL), rainshower (S112WR), handshower (3558BL), drop ell (A725WR), multi-function pivoting bodyspray (TS1422BL)

*Where local water use regulations allow.

Terms to Know

Getting familiar with a few commonly used terms will help you navigate the shower planning process.

Annex™ Shower Rail system (TS3661NH) with Eva® shower trim (T2131), handshower (164927), and rainshower (6345)

EXPERT ADVICE

When meeting with a designer about the plan for your bath, it's helpful to have rough measurements of your shower area.

Showering Device

A general name for any component that produces spray – showerhead, handshower, rainshower or a set of body sprays.

Trim

The visible, decorative parts of your shower – examples include handles, escutcheon plates and shower arms in different styles and finishes.

Mixing Valve

The part of your shower system that connects to your hot and cold water supply lines. This valve lets you blend, or mix, hot and cold water to select your preferred temperature. It will either send water directly to a showering device or to a secondary valve (a volume control or transfer valve) which, in turn, directs water flow. Moen® offers four mixing valves: U by Moen™, ExactTemp®, M-CORE™ and Posi-Temp®.

Transfer Valve

The part of your shower system that directs water from a mixing valve to two or three different showering devices. A transfer valve with independent functionality allows you to operate only one of the connected showering devices at a time. Transfer valves with shared functionality allow you to operate multiple showering devices individually or at the same time.

Volume Control Valve

This valve lets you turn water flow on/off and adjust the volume (amount) of water going to a single showering device. Every showering device paired with an ExactTemp thermostatic mixing valve will require its own volume control valve.

Thermostatic

Maintains precise temperature by continually adjusting the incoming mix of hot and cold water.

Pressure-Balancing

Designed to balance the ratio of incoming hot and cold water in order to maintain temperature when there is a water pressure change that could come from flushing a toilet or starting the dishwasher. Pressure-balancing mechanisms are safety devices that protect against extreme water temperature changes by maintaining temperature within $\pm 3.6^{\circ}\text{F}$ ($\pm 2^{\circ}\text{C}$).

Understanding Moen® Valves

Different valves give you a variety of ways to control – and design – your shower.

VALVE	TYPE	HOW IT WORKS
U by Moen™	Digital Thermostatic	<ul style="list-style-type: none"> • Voice control, remote activation or push button • Set and maintain temperature with precise accuracy • Features include Pause and Preset personalization controls • Choose from a 2-port option that flows 2 showering devices or a 4-port option that can flow up to 4 showering devices
ExactTemp® ¾"	Thermostatic	<ul style="list-style-type: none"> • Precise temperature control • Temperature override button allows user to exceed 105° temperature safety stop with a maximum temperature of 120° • High flow capacity supplies up to four showering devices • Must be used with at least one ExactTemp ¾" volume control valve
ExactTemp ¾" Volume Control	Volume Control	<ul style="list-style-type: none"> • Controls flow to a single showering device • Rotate handle to adjust volume of water • Must be used with ExactTemp ¾" mixing valve
M-CORE™ 2-Series	Pressure Balancing*	<ul style="list-style-type: none"> • Rotate handle to turn on flow of water and to adjust temperature, does not feature variable volume control • Cartridge for M-CORE valves are included in the M-CORE trim kits
M-CORE™ 3-Series	Pressure Balancing and Volume Control*	<ul style="list-style-type: none"> • Lift handle up to turn on flow of water. The higher the handle position the more volume of water. • Pivot handle left or right for temperature control • Cartridge for M-CORE valves are included in the M-CORE trim kits
Posi-Temp®	Pressure- Balancing	<ul style="list-style-type: none"> • Temperature control: rotate handle to turn on flow of water and to adjust temperature, does not feature variable volume control
Transfer Valve	Transfer	<ul style="list-style-type: none"> • Directs water to different showering devices • Supports 2 or 3 showering devices • Available with independent (1 device in use at a time) or shared (any 2 devices used at once) functions

*Cartridges are included in M-CORE trim kits.

EXPERT ADVICE

Running multiple showering devices at once can quickly drain an undersized conventional hot water tank. Assess the size and type of your current water heater. It might be the right time to include an upgrade as part of your bathroom remodel.

For additional details and valve features, see the valve comparison chart on page 72-73.

U BY MOEN

SMART SHOWER.

Want the perfect shower? All you have to do is ask.

With three ways to control your smart shower – the sound of your voice, a swipe of your smartphone app or the touch of the sleek wall controller – U by Moen™ will transform the way you shower. You can even save personalized settings as preset experiences you can call up anytime.

For a complete product demo, visit moen.com

Controller (TS3304BL)

Controller (TS3304TB)

M-CORE™

Adapted to your needs.

Flexibility is at the heart of the M-CORE valve system. For pros, M-CORE includes a straightforward design and built-in features that streamline and speed up installation. For homeowners, it lets them make trim style decisions and functionality updates after the valve has been plumbed. Plus, M-CORE offers more matching trim for mixing valves and transfer valves across a wider array of trim options than ever – including all Moen® showroom collections.

Image to the right: Flara M-CORE™ 3-Series with integrated transfer valve (UTS2411BG), handshower with slide bar (3868EPBG), drop ell (A725BG), rainshower (S6365BG),

IMMERSION®
rainshower technology

IMMERSION® RAINSHOWER TECHNOLOGY

Consistently invigorating.

By sending water through a series of self-pressurized channels, Immersion creates ideal force and distributes it evenly across the entire spray pattern.

FLUSHMOUNT BODY SPRAYS

Ahhh-mazing.

Tilt the spray to cover every inch of your body. Or just that one spot. Multi-function models also let you toggle between soothing rinse to invigorating spray.

Pivoting body spray (TS1320)

SHOWER RAILS

More functionality. Less construction.

Transform your standard shower by adding more showering options without a costly remodel.

Annex™ shower rail (TS3661NH), Align shower trim (T2191), handshower (155891), rainshower (S112) and shower arm (S110)

ANNEX™

Add any showerhead and handshower style you wish, then transfer water from one to the other.

NEBIA BY MOEN™

Enjoy the full-coverage, water-saving atomized spray experience from a rainshower and handshower.

Nebia by Moen™ shower rail system (N2070BL)

Magnetix® handshower (3662EPBN)

Magnetix® handshower (3662EPBN)

MAGNETIX® HANDSHOWER

It's a snap to use.™

So easy, you can do it with your eyes closed. Or full of soap. An integrated magnet securely snaps back into place when you place it near the shower arm dock.

BATH SAFETY PRODUCTS

A fresh look at safety.

Slips and falls in the bath are a danger for everyone. The good news? Making your shower safer doesn't have to detract from its beauty. Decorative grab bars, designed to coordinate with Moen® shower trim collections, add style and stability.

Learn more about bathroom safety products at: moen.com

90° grab bar (YG8824)

Teak shower seat (DH7110)

M•PACT® COMMON VALVE SYSTEM

Change your mind, not your plumbing.

Update your bath without changing the shower valve behind the wall. Valves built on the M•PACT Common Valve System accept any trim style made for that valve. Whenever you're ready for a new look, you can upgrade in minutes – simply by swapping out a new style or finish.

U by Moen™ | Dream Spa

CONFIGURATION 01

U by Moen 4-Outlet Valve 4 Showering Devices Two Walls

- * Valve can be mounted up to 30 feet from controller and up to 6 feet from GFCI outlet
- * Valve and GFCI outlet must be accessible after install; they cannot be completely sealed behind a wall
- * Controller requires an 8¹/₁₆" × 3³/₈" space within the shower
- * Outlet A is the primary outlet; this outlet should operate the primary showerhead
- * Moen® handshowers come with an integrated double check valve to prevent back-siphon
- * Body sprays require a pressure-balancing loop to allow for equal supply of water to each body spray. Maximum of 3 body sprays on 1 outlet.
- * 2 body sprays may be operated as 1 function
- ☼ Shower can be operated and personalized remotely with the U by Moen app, which is available for Android and iOS

Shower spa trim is compatible with the M•PACT® Common Valve System.

Showerhead, Arm and Flange | Handshower, Drop Ell sold separately | Multi-Function Body Spray [x2] | Single-Function Body Spray [x2] | U by Moen Shower 4-Outlet Controller

- * Primary showerhead
- * Moen® handshowers come with an integrated double check valve to prevent back-siphon
- * Body sprays require a pressure-balancing loop to allow for equal supply of water to each body spray. Maximum of 4 body sprays on 1 volume control valve.

Shower spa trim is compatible with the M•PACT® Common Valve System.

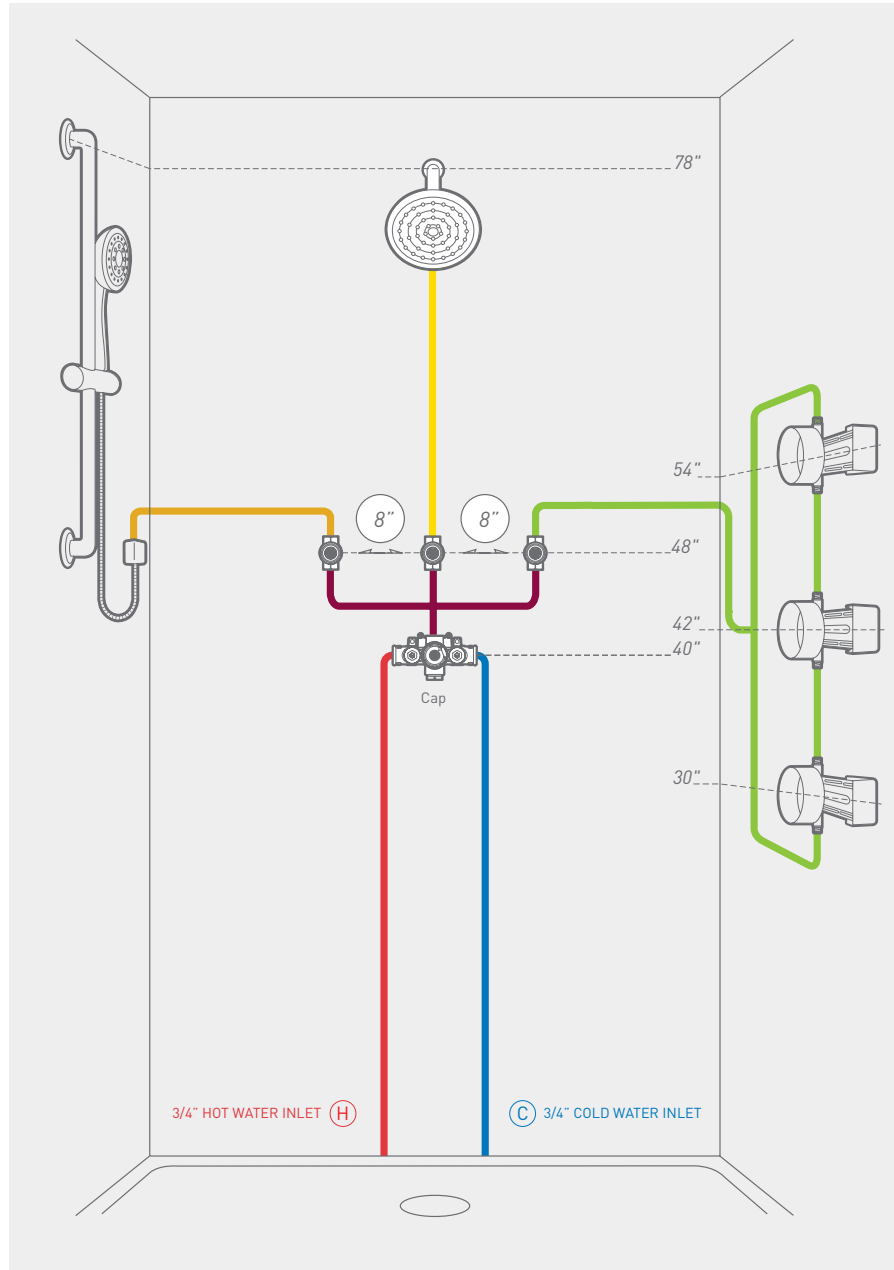

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

ExactTemp® | Dream Spa

CONFIGURATION 09

ExactTemp 3/4" Mixing and Volume Control Valves 3 Showering Devices One Wall and Ceiling

- * Always use included plug for tub port when using ExactTemp 3/4" valve (S3371) in a shower spa configuration
- * Arrow on 3/4" volume control valve (S3600) should always point in direction of flow
- * Primary showerhead
- * Ceiling-mounted rainshower
- * Moen® handshowers come with an integrated double check valve to prevent back-siphon

Shower spa trim is compatible with the M•PACT® Common Valve System.

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

ExactTemp® | Dream Spa

CONFIGURATION 10

ExactTemp 3/4" Mixing and Volume Control Valves 2 Showering Devices One Wall

- * Always use included plug for tub port when using ExactTemp 3/4" valve (S3371) in a shower spa configuration
- * Arrow on 3/4" volume control valve (S3600) should always point in direction of flow
- * Primary showerhead
- * Moen® handshowers come with an integrated double check valve to prevent back-siphon

Shower spa trim is compatible with the M•PACT® Common Valve System.

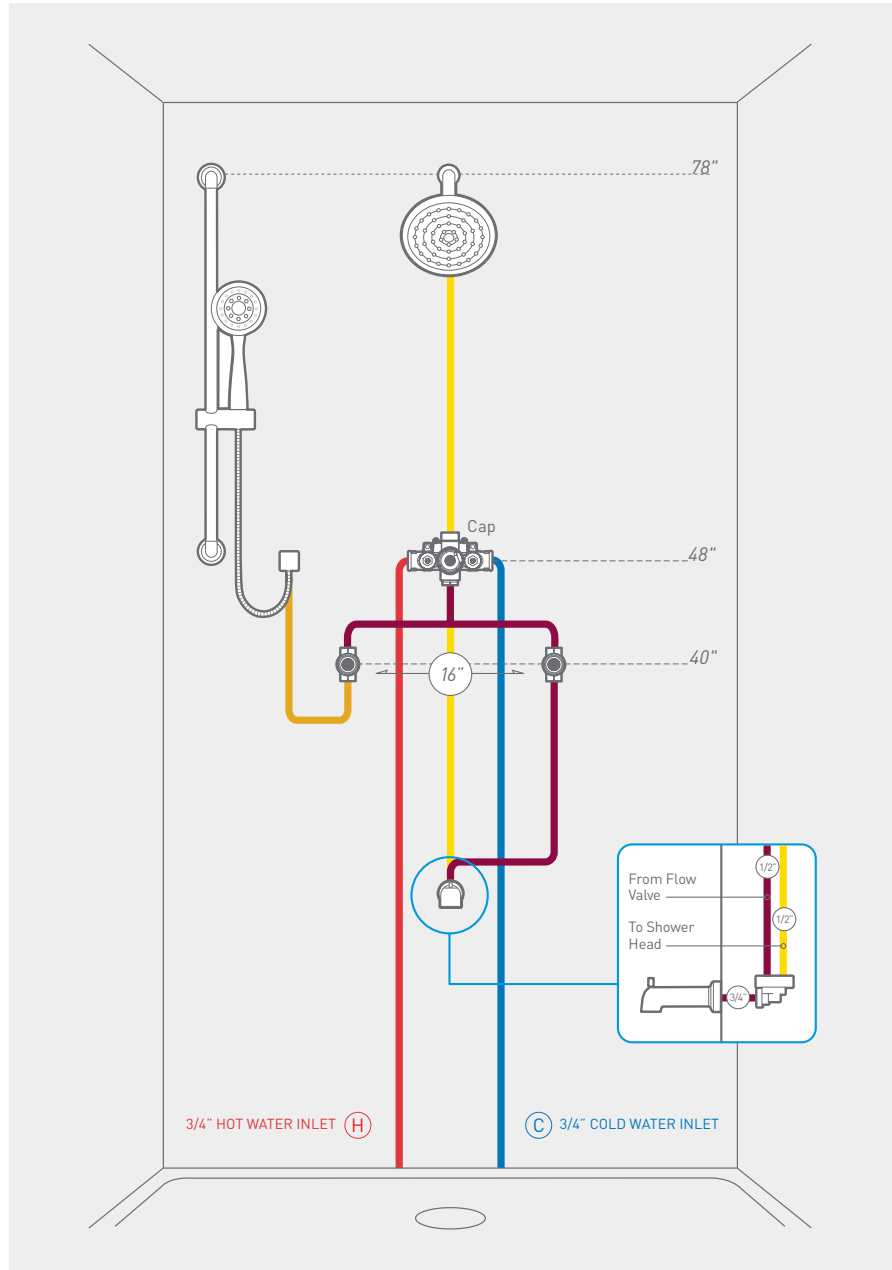

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

ExactTemp® | Dream Spa

CONFIGURATION 11

ExactTemp 3/4" Mixing and Volume Control Valves 2 Showering Devices and Diverting Tub Spout One Wall

- * Always use included plug for tub port when using ExactTemp 3/4" valve (S3371) in a shower spa configuration
- * Arrow on 3/4" volume control valve (S3600) should always point in direction of flow
- * Primary showerhead
- * Moen® handshowers come with an integrated double check valve to prevent back-siphon
- * Diverter tub spout
 - When using a diverter tub spout with a 3/4" volume control valve (S3600), plumb the valve outlet to the twin ell front vertical inlet
 - Plumb the twin ell, rear-vertical outlet to the showerhead
 - Plumb the twin ell, front-horizontal outlet to the tub spout

Shower spa trim is compatible with the M•PACT® Common Valve System.

NOTE: This configuration is intended for use with a diverter tub spout.

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

M-CORE Mixing Valve with M-CORE Transfer Valve 2 Showering Devices One Wall

MIXING VALVE

- * M-CORE U130 (3-port) valves are recommended for shower-only applications. If U140 (4-port) valves are used in a shower-only application, the tub port must be capped.

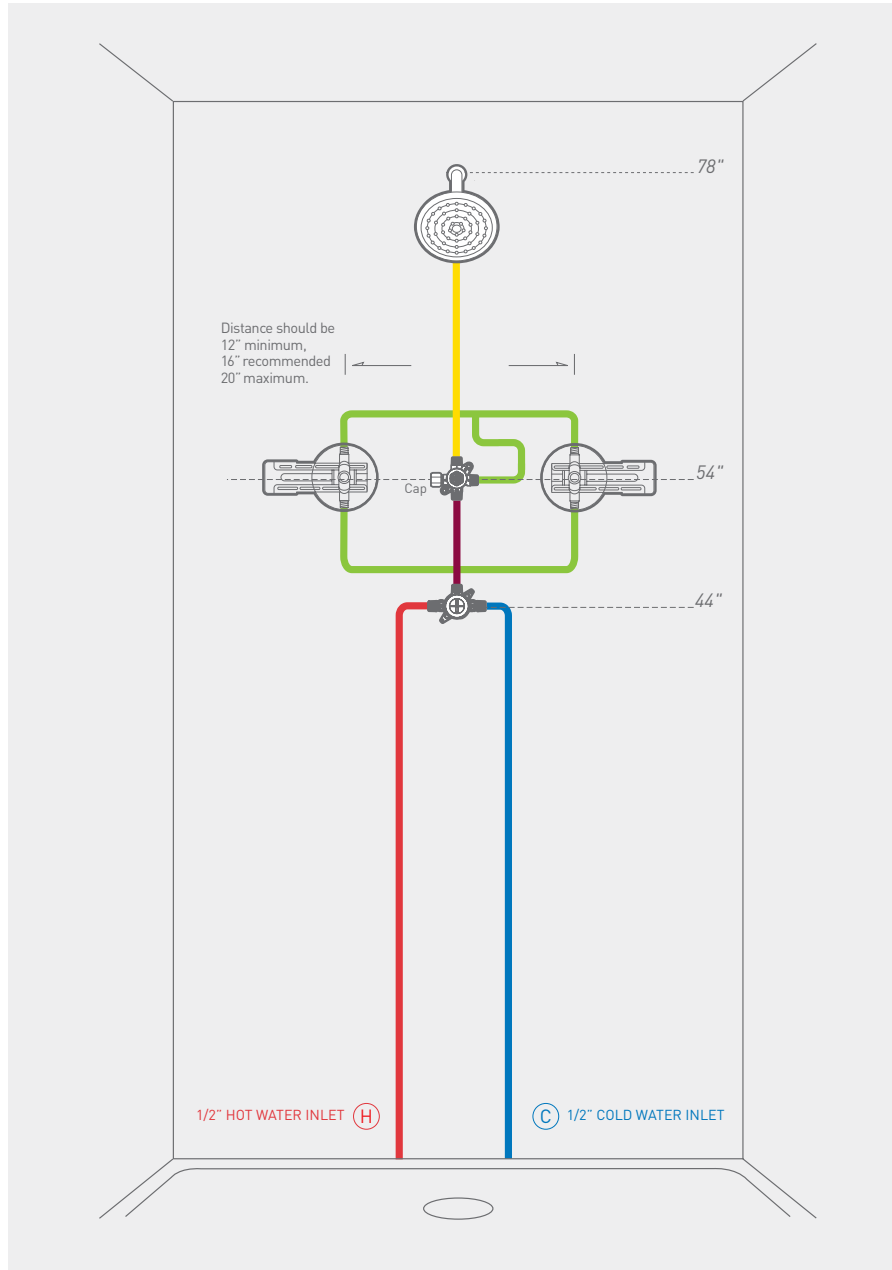

TRANSFER VALVE

- * Use M-CORE U231 transfer valve for 2 independent functions. Cap off third outlet.
- * Use M-CORE U361 transfer valve for 2 independent and 1 shared functions. Cap off third outlet.
- * Primary showerhead
- * Moen® handshowers come with an integrated double check valve to prevent back-siphon

IMPORTANT - plumb showering outlets as valve diagram recommends. Plumbing 2 outlets will require capping port number 3.

 Shower spa trim is compatible with the M•PACT® Common Valve System.

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

M-CORE™ | Shower Spa

CONFIGURATION 08

M-CORE Mixing Valve with M-CORE Transfer Valve 2 Showering Devices and Diverting Tub Spout One Wall

MIXING VALVE

- * M-CORE U140 (4-port) valves are used in tub/shower applications
- * Shower port must be capped

TRANSFER VALVE

- * Use M-CORE U231 transfer valve for 2 independent functions
- * Use M-CORE U361 transfer valve for 2 independent and 1 shared functions
- * When plumbing the U361 valve to flow 3 shared devices, 50 psi is recommended for optimum performance.
- * Primary showerhead

- * Body sprays require a pressure-balancing loop to allow for equal supply of water to each body spray. Maximum of 2 plumbed to 1 transfer valve outlet.

TUB SPOUT

- * When using a diverter tub spout, plumb the mixing valve outlet to the twin ell, front-vertical outlet
- * Plumb the twin ell, rear-vertical outlet at the transfer valve inlet
- * Plumb the twin ell, front-horizontal outlet to the diverting tub spout

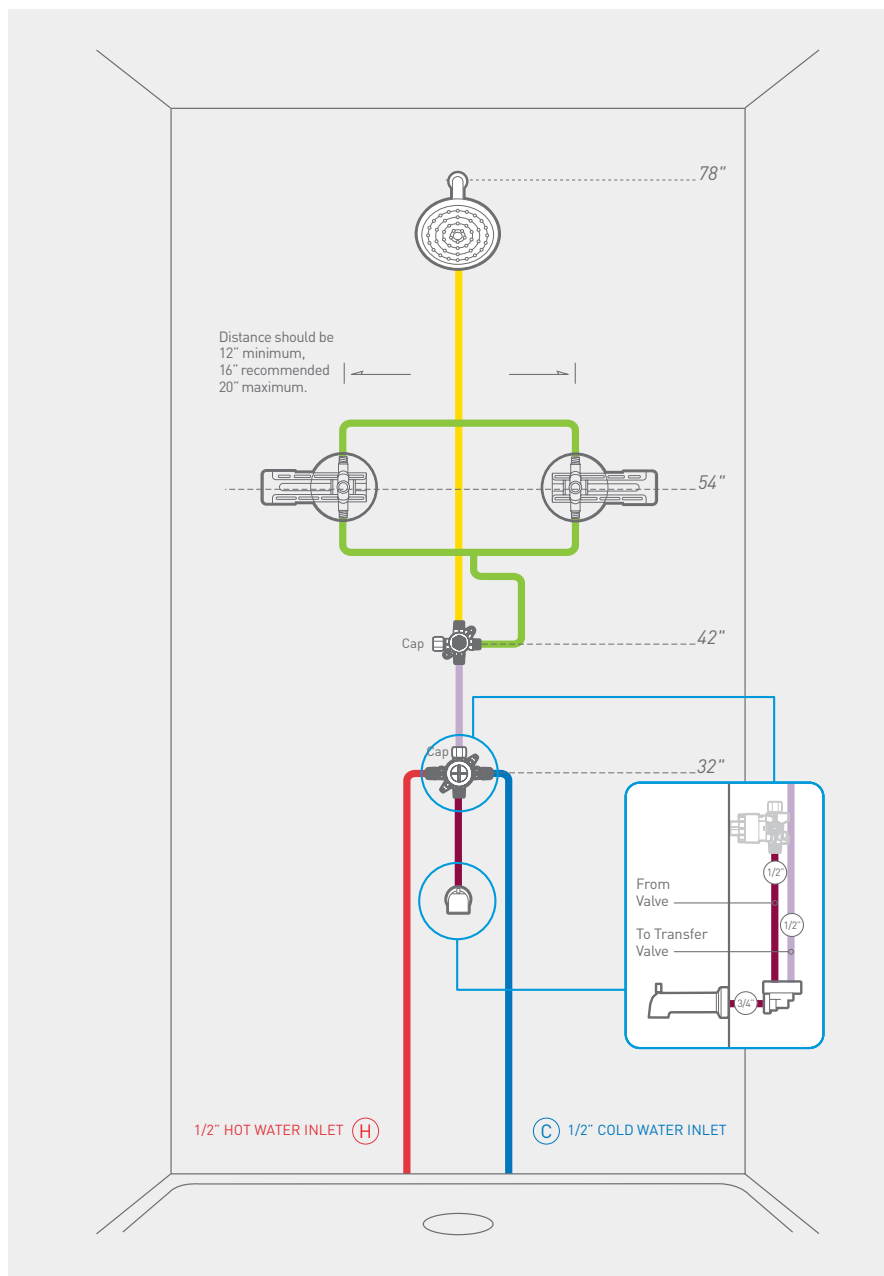

TRANSFER VALVE

Plumb outlet 1 to primary showering device

Cap off third outlet

Plumb outlet 2 to second showering device

Twin ell rear vertical outlet plumbed to transfer valve inlet

IMPORTANT - plumb showering outlets as valve diagram recommends. Plumbing 2 outlets will require capping port number 3.

Shower spa trim is compatible with the M•PACT® Common Valve System.

Showerhead, Arm and Flange

Multi-Function Body Spray (x2)

Diverter Tub Spout

Transfer Valve Trim

Valve Trim

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

M-CORE™ | Shower Spa

CONFIGURATION 09

M-CORE Mixing Valve with M-CORE Transfer Valve 2 Showering Devices and Diverting Tub Spout One Wall

MIXING VALVE

- * M-CORE U140 (4-port) valves are used in tub/shower applications
- * Shower port must be capped

TRANSFER VALVE

- * Use M-CORE U231 transfer valve for 2 independent functions
- * Use M-CORE U361 transfer valve for 2 independent and 1 shared functions
- * Primary showerhead
- * Moen® handshowers come with an integrated double check valve to prevent back-siphon

TUB SPOUT

- * When using a diverter tub spout, plumb the mixing valve outlet to the twin ell, front-vertical outlet
- * Plumb the twin ell, rear-vertical outlet to the transfer valve inlet
- * Plumb the twin ell, front-horizontal outlet to the diverting tub spout

IMPORTANT - plumb showering outlets as valve diagram recommends. Plumbing 2 outlets will require capping port number 3.

Shower spa trim is compatible with the M•PACT® Common Valve System.

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

M-CORE™ | Shower Spa

CONFIGURATION 09A

M-CORE Mixing Valve with M-CORE Transfer Valve 2 Showering Devices and Diverting Tub Spout One Wall

MIXING VALVE

- * M-CORE U140 (4-port) valves are used in tub/shower applications

TRANSFER VALVE

- * Use M-CORE U231 transfer valve for 2 independent functions
- * Use M-CORE U361 transfer valve for 2 independent and 1 shared functions

- * Primary showerhead

- * Moen® handshowers come with an integrated double check valve to prevent back-siphon

TUB SPOUT

- * When using a diverter tub spout, plumb directly to the mixing valve

IMPORTANT - plumb showering outlets as valve diagram recommends. Plumbing 2 outlets will require capping port number 3.

 Shower spa trim is compatible with the M•PACT® Common Valve System.

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

Posi-Temp® + M-CORE™ | Shower Spa

CONFIGURATION 10

Posi-Temp Mixing Valve with M-CORE™ Transfer Valve 3 Showering Devices One Wall and Ceiling

MIXING VALVE

- * Posi-Temp 3-port valves for shower-only applications
- * If using a Posi-Temp 4-port valve for shower-only application, the shower port must be capped. Tub port will supply water to transfer valve.

TRANSFER VALVE

- * Use M-CORE U231 transfer valve for 3 independent functions
- * Use M-CORE U361 transfer valve for 3 independent and 3 shared functions
- * Primary showerhead
- * Ceiling-mounted rainshower
- * Moen® handshowers come with an integrated double check valve to prevent back-siphon

IMPORTANT - plumb showering outlets as valve diagram recommends. Plumbing 2 outlets will require capping port number 3.

Shower spa trim is compatible with the M•PACT® Common Valve System.

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

Posi-Temp® + M-CORE™ | Shower Spa

CONFIGURATION 11

Posi-Temp Mixing Valve with M-CORE™ Transfer Valve 2 Showering Devices One Wall

MIXING VALVE

- * Posi-Temp 3-port valves for shower-only applications
- * If using a Posi-Temp 4-port valve for shower-only application, the shower port must be capped. Tub will supply water to transfer valve.

TRANSFER VALVE

- * Use M-CORE U231 transfer valve for 2 independent functions
- * Use M-CORE U361 transfer valve for 2 independent and 1 shared functions
- * Primary showerhead
- * Moen® handshowers come with an integrated double check valve to prevent back-siphon

IMPORTANT - plumb showering outlets as valve diagram recommends. Plumbing 2 outlets will require capping port number 3.

 Shower spa trim is compatible with the M•PACT® Common Valve System.

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

Posi-Temp® + M-CORE™ | Shower Spa

CONFIGURATION 12

Posi-Temp Mixing Valve with M-CORE™ Transfer Valve 2 Showering Devices and Diverting Tub Spout One Wall

MIXING VALVE

- * Use Posi-Temp 4-port valve for tub/shower-only application
- * The shower port must be capped. Tub port will supply water to transfer valve.

TRANSFER VALVE

- * Use M-CORE U231 transfer valve for 2 independent functions
- * Use M-CORE U361 transfer valve for 2 independent and 1 shared functions

* Primary showerhead

* Moen® handshower comes with an integrated double check valve to prevent back-siphon

TUB SPOUT

- * When using a diverter tub spout, plumb the mixing valve outlet to the twin ell, front-vertical outlet
- * Plumb the twin ell, rear-vertical outlet to the transfer valve inlet
- * Plumb the twin ell, front-horizontal outlet to the diverting tub spout

IMPORTANT - plumb showering outlets as valve diagram recommends. Plumbing 2 outlets will require capping port number 3.

Shower spa trim is compatible with the M•PACT® Common Valve System.

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

Posi-Temp® | Shower Spa

CONFIGURATION 13

Posi-Temp with Integrated Transfer Valve 2 Showering Devices One Wall

- * Use Posi-Temp 2521 or 2571 integrated transfer valve for 2 independent functions
- * Use Posi-Temp 2551 or 2581 integrated transfer valves for 2 independent and 1 shared function
- * Primary showerhead
- * Moen® handshowers come with an integrated double check valve to prevent back-siphon

Shower spa trim is compatible with the M•PACT® Common Valve System.

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

Posi-Temp® | Shower Spa

CONFIGURATION 14

Posi-Temp with Integrated Transfer Valve 2 Showering Devices and Diverting Tub Spout One Wall

- * Use Posi-Temp 2521 or 2571 integrated transfer valve for 2 independent functions
- * Use Posi-Temp 2551 or 2581 integrated transfer valves for 2 independent and 1 shared function

* Primary showerhead

* Moen® handshowers come with an integrated double check valve to prevent back-siphon

TUB SPOUT

- * When using a diverter tub spout, plumb the integrated transfer valve outlet to the twin ell, front-vertical outlet
- * Plumb the twin ell, rear-vertical outlet to the drop ell
- * Plumb the twin ell, front-horizontal outlet to the diverting tub spout

Shower spa trim is compatible with the M•PACT® Common Valve System.

Mixing Lever
Controls the temperature and on/off

Diverter Lever
Diverts water to various showering devices

All vertical dimensions measured from the floor. Dimensions listed are suggested. Refer to specification sheet for critical dimensions for installation.

Annex™ shower rail system (TS3661NH), Gibson shower trim (T2901), rainshower (S176) and handshower (189315)

SHOWER RAILS

Keep Your Bathroom, Elevate Your Experience

Create a shower experience that fits you and your existing bathroom. Innovative Shower Rail systems let you add showering devices without the cost and hassle of tearing into your existing shower surround. More options. More flexibility. Less dust.

Glyde™ Posi-Temp® shower only (T25842EPBN)

U by Moen™ Specs

Type	Digital Thermostatic (Meets applicable thermostatic safety codes)
Functionality:	<ul style="list-style-type: none"> • Wi-Fi/cloud-based digital shower with mobile connectivity • Control by voice activation, smartphone app or soft-touch, wall-mount controller • Dial-in temperature with precise accuracy • Warm up and pause mode • Store 2 preset shower experiences on the controller with up to 12 total in the app • Optional shower timer
Spa Compatibility:	2-outlet valve (S3102) supplies 2 shower devices 4-outlet valve (S3104) supplies up to 4 shower devices
Trim:	Controller available in Terra Beige or Matte Black
Temperature Limit Stops:	Set at 115°, adjustable up to 120°F
Inlet Size:	3/4" on 4-outlet valve, 1/2" on 2-outlet valve
Outlet Size:	1/2"
Connection Options:	CC

2-Outlet Valve with Controller

4-Outlet Valve with Controller

ExactTemp® Specs

ExactTemp® 3/4" Thermostatic Valve

Type	Thermostatic (Meets applicable thermostatic safety codes)
Functionality:	<ul style="list-style-type: none"> • Dial in and maintain pinpoint temperature • Automatically adjusts to maintain temperature when there is fluctuation in hot/cold water supply • Temperature memory: dial stays in the same temperature position last used and returns to the temperature within a few seconds
Spa Compatibility:	Yes. Must be used with at least one 3/4" volume control valve (S3600)
Trim:	M•PACT® common valve system
Temperature Limit Stops:	Adjustable. Safety temperature stops at 105°, but can override to 120°
Stops:	Check stops
Inlet Size:	3/4"
Outlet Size:	3/4"
Connection Options:	IPS

13	Posi-Temp® with Integrated Transfer Valve	3.0	4.0	5.0	No	Showerhead, handshower

*Min 50 psi recommended when plumbing a showerhead and 2 body sprays for shared flow.

Choose the Right Moen® Shower Valve for Your Bathroom

How to Choose the Right Valve

U by Moen™ Shower 2-Outlet Valve**

U by Moen™ Shower 4-Outlet Valve**

ExactTemp® 3/4" Thermostatic Valve***

VALVE OPTIONS AT-A-GLANCE

	Thermostatic Valves		
COMFORT FEATURES			
Personalization Create settings for every occasion — post workouts, lazy mornings and more.	●	●	
Temperature consistency Water temperature won't fluctuate even as the hot water in your tank gets low.	●	●	●
Maximum-flow shower spa experience Provides the greatest balance of force, flow and coverage in a Moen® shower spa.	●	●	●
Shower spa compatible Add an extra showerhead or handshower, or design a complete shower spa experience.	●	●	●
CONVENIENCE FEATURES			
Remote activation Sync your shower to your smartphone to start, stop and pause remotely.	●	●	
Precision thermostatic control Dial up the same water temperature every day, just like a thermostat.	●	●	●
Voice activation Activate your shower with the sound of your voice.	●	●	
Volume control Lets you adjust the amount of water that flows through your tub/shower from a gentle stream to full force.			●
Temperature memory Dial stays in the same temperature position you last used and returns to that temperature within a few seconds.			●
Warm up and pause Save water by having the shower warm up to temperature and pause until you are ready to get in.	●	●	
SAFETY FEATURES			
Maximum temperature setting You can set the hottest temperature setting.	●	●	●
Meets applicable pressure-balancing or thermostatic safety codes	●	●	●
DEPENDABILITY FEATURES			
Limited lifetime warranty	●	●	●
Easy-to-replace cartridge	N/A	N/A	●

* Must be used with diverting valves 3372, 3362, or 3375 to obtain shower spa compatibility.

** U by Moen is warranted for 5 years against leaks, drips and operation defects to the original consumer purchaser; 1-year warranty if used in commercial applications. 5-year warranty on digital components, limited lifetime trim warranty.

*** Use with ExactTemp 3/4" volume control valves.

Please see [moen.com/consumer-support/warranty](https://www.moen.com/consumer-support/warranty) for complete product warranty information.

Frequently Asked Questions

U by Moen™ Shower

Learn more about the system by visiting moen.com or contact 1-800-BUY MOEN.

Can I use quick connects for inlets and outlets?

Yes, any compatible quick connect can be used for installation.

Valve inlets are standard pipe sizes (1/2 inch on the two-outlet shower [S3102] and 3/4 inch on the 4-outlet vertical spa [S3104]). For the 2-outlet valve, the inlets and outlets are 1/2 inch; the 4-outlet valve has 3/4-inch inlets and 1/2-inch outlets.

Is the U by Moen shower valve compatible with PEX, copper and CPVC?

Yes, the CC connections on U by Moen shower valve outlets and inlets can be connected to PEX, copper or CPVC with standard plumbing adapters.

Is an access panel required for the U by Moen shower valve?

Yes. The recommended minimum access panel opening is 14 inches wide by 29 inches high. The access panel is a standard code requirement and is required to access the shutoffs, filter screens, AC outlet and optional battery backup and to service the valve if needed.

Do I have to plug in the U by Moen shower valve, and is an electrician required for installation?

Yes, it is necessary to plug the valve into a 110V AC supply on a GFCI circuit. A certified electrician should install the initial GFCI outlet.

Are there any issues with electricity, and is there a chance of being shocked?

No, the U by Moen shower valve is designed so the water is isolated from the electronics. In addition, the system operates under low voltage (12V). All current is properly isolated and sealed (through the controller) and the product is third-party certified by IAPMO (cUPC) to the standards ASSE 1016/ASME A112.1016/CSA B 125.16, ASME A112.18.1/CSA B125.1, UL 1951 and CSA C22.2 Nos. 14 and 68.

A GFCI outlet will provide additional protection. The GFCI is an Earth-leakage breaker that detects faults to ground. The current threshold is very low, typically 15mA, which means it will trip well before any risks could occur. Jetted tubs already require dedicated GFCIs (110V, 15–20A) for pump/motor and heaters.

How many shower devices can be used with a U by Moen shower digital vertical spa?

The Moen® 4-outlet valve [S3104] features 4 outlets and has a maximum flow rate of 16 gpm at 60 psi. The 2-outlet valve [S3102] features 2 outlets and has a maximum flow rate of 10 gpm at 60 psi.

The total flow from all shower devices plumbed to the valve should not exceed 14 gpm. The total flow from all shower devices attached to a single outlet should not exceed 6 gpm.

ExactTemp®

How does the ExactTemp valve work?

The ExactTemp requires a minimum of 2 valves, 1 thermostatic and 1 volume control valve. The thermostatic valve will only adjust the temperature of the water, and the volume control will turn the unit on and off, and adjust the volume of water. The thermostatic valve has a safety stop preset at 105°. The temperature override button will allow the user to exceed this temperature and reach temperatures of up to 120°. In addition to being shower spa compatible, it also provides Thermostatic Control, Temperature Consistency and Temperature Memory. For more information, please view our product literature in our Literature Center.

Posi-Temp®/M-CORE™

What is meant by a “pressure-balancing” tub and shower faucet?

A pressure-balancing tub and shower faucet balances incoming hot and cold water pressure to compensate for fluctuations in water flow. Balancing the water flow keeps shower temperatures constant and comfortable, within ±3.6°F (±2°C) of the original temperature, despite other demands such as flushing the toilet or starting the dishwasher. Moen's Posi-Temp® and M-CORE™ tub and shower valves all feature pressure-balancing. Both valves require pressure on the hot and the cold side to operate.

What is the difference between a Posi-Temp® tub and shower valve and a M-CORE™ tub and shower valve?

While the valves do have several similarities:

- A pressure-balanced system that maintains water temperature within ±3.6°F (±2°C)
- Built-in temperature limit stops which allow you to control how far the handle rotates, therefore, controlling the range of water temperature
- Provide ideal water flow for shower spa or tub/shower systems
- Available in a variety of connections from common 1/2" CC/sweat, 1/2" IPS-threaded, combination 1/2" CC/IPS, 1/2" Crimp PEX, 1/2" Cold Exp Pex and CPVC
- Meets pressure-balancing safety codes
- M-CORE cartridges ship in M-CORE 3-Series and 2-Series shower trim kits (not with the valve)

There are a few differences to consider before making a decision.

Feature	M-CORE™ 3-Series	M-CORE™ 2-Series	Posi-Temp®
Handle Operation – How the faucet is turned on and off.	Lift/Rotate	Rotation	Rotation
Temperature Memory – When shutting-off the faucet, the handle stays in the exact temperature position you set during use. The next time you turn on the faucet, within a few seconds, the water temperature reaches your last temperature setting.	Yes	No	No
Volume Control – Controls the water flow rate so you get the amount of water you want at the temperature you want.	Yes	No	No
